

(FAQ) Frequently asked questions V1.4

<https://www.OPPO-JB.com>

Q: Does your jailbreak firmware work with the latest official firmware installed on my player?

A: Yes, our jailbreak works with any firmware version installed, including the latest version.

Q: How does the jailbreak work, do I need to open my player?

A: Our **USB-TTL jailbreak** for the **Oppo UDP/BDP** players needs to be flashed using an **USB-TTL to serial interface** connected from your computer to the Oppo mainboard's flash port, so yes, the player (housing) needs to be opened.

For **BDP-105(D)** and **UDP-205** models **additionally** the **audioboards** inside the housing **need to be removed** to get access to the firmware flash port on the player's mainboard. The Cambridge Audio CXUHD firmware can also be flashed using this method, but it is only needed if your CXUHD has already an older jailbreak firmware installed. For CXUHD players with original firmware installed we recommend using the simple USB jailbreak method.

Our **simple USB jailbreak** - available for the **Cambridge Audio CXUHD** player - can be installed without a USB-TTL interface and without opening the case just by updating the player with our firmware from a USB flash drive.

Q: Which USB-TTL serial interface/cables do I need to buy and where? Are these items expensive?

A: We will provide **Amazon links** to the interface and adapter cables needed for the USB-TTL jailbreak. These parts are **not** expensive: **Interface** ~ € 8/ \$ 11 **Cables:** ~ € 10/ \$ 8

Q: Do I lose any warranty when I open my BDP/UDP-Player?

A: No, **you don't lose any warranty** as there is **no sealing** of the player's housing. As long as you don't damage any hardware inside **it's not apparent if the player was opened or not.**

Q: I'm not technically savvy and afraid to open my player, isn't it very difficult?

A: No, it's not difficult at all. The jailbreak procedure is rather **fast** (about 20 minutes) **and easy** for **BDP-103(D)** and **UDP-203** models. However, for **BDP-105(D)** and **UDP-205** models you need more time (about 45 minutes) and **you need to be very careful** when **removing the audioboards and connectors inside** before the jailbreak procedure, also afterwards during reinstallation.

Anyway, if you wish we can help you step-by-step with the whole procedure over Skype for free!

Q: If there's an official firmware update available, how long does it take for the updated jailbreak firmware to be released and how can I get it?

A: Usually it takes **8-10 weeks** after the release of the new official firmware for the jailbreak firmware to be released. **As a previous customer** you will receive **every updated jailbreak firmware from us for free** as soon as it is available **automatically delivered to your E-Mail address.**

Q: Can I flash back the official/original firmware easily?

A: Yes, you can easily flash back any official firmware version with the USB-TTL method, we can provide detailed instructions about that. With the simple USB jailbreak installed on your CXUHD player you can just overwrite your player with the original firmware.

Q: Are self-made/self-authored SACD-R discs supported (for example made with Philips SuperAuthor)?

A: No, only 1:1 copies/rips of original SACD-discs are officially supported by our firmware.

Q: Does your jailbreak firmware support "AutoScript" for mounting network shares via USB drive?

A: No, script executions in our firmware have been disabled for security reasons.

If you have any more questions, don't hesitate to contact us!
